Hi there,

I am writing to express my interest in the Intern role at VIAVI Solutions, as advertised on your website. As a computer science student and experienced tutor in Java and Python, I am confident that I have the necessary skills and experience to excel in this position.

I have strong software development experience in Python, as well as knowledge and experience with AI and Machine Learning frameworks and platforms. Additionally, I have experience developing ML applications under TensorFlow and PyTorch, and have worked with computer vision theory and applications.

I am excited about the opportunity to assist in the development and validation of optical inspection applications using Machine Learning and to develop ML training tools and datasets. Working closely and collaborating with R&D Developers in an Agile SCRUM environment is also something that I am familiar with and enjoy.

As a tutor at Memorial University, I have honed my communication skills and ability to work independently, while also being able to collaborate effectively with others. I am self-motivated and always looking for ways to push boundaries and seize opportunities.

I am excited about the possibility of joining the VIAVI team and contributing to your mission of keeping the world connected. Thank you for considering my application.

Sincerely,
Taranpreet Singh
